Phaeton XTL Series LED Tank Lights are Simply Brilliant and Simply Better - 33x Brighter than the First Generation Product

Jacoby-Tarbox® has the solution for operators who are tired of inferior tank illumination and all of the associated safety and maintenance issues: Phaeton XTL Series LED Tank Lights. Simply put, these tank lights are simply brilliant!

Phaeton XTL Series LED Tank Lights are designed for simple, straightforward viewing; no second window is required. With Phaeton's "view thru" technology, both illumination and viewing are possible with just one window.

Available in 4" and 6" models, Phaeton XTL Series LED Tank Lights mount directly against the tank window. This unique mounting style greatly reduces the reflected light associated with traditional units.

Phaeton Lights offer 10 years of continuous duty, and don't ever need to be turned on or off! Since they consume less than one amp, they stay cool to the touch - no matter how long they stay on. Because Phaeton Lights can illuminate constantly yet always remain cool, the product will never bake to the window.

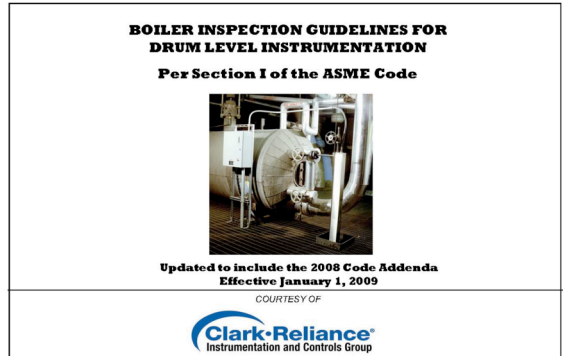

With Phaeton Lights, no maintenance is required, saving time and money. The innovative design makes installing or retrofitting Phaeton Lights unbelievably fast and easy. The process, which typically takes about two minutes on any tank window 4" or larger, consists of slipping three brackets over the retaining flanged and securing them. If it ever needs cleaning, just unclip and wash; there's no need to disconnect.

Phaeton Lights are 33x brighter than the first generation product, but use only 1/20 the power of a 100-watt bulb, without the heat. For even more enhanced brilliance, a 4" model can be nested inside a 6" model for ultimate viewing capabilities.

Clark-Reliance Offers Free Guide Highlighting Drum Inspection Guidelines for Drum Level Instrumentation

The Clark-Reliance Instrumentation and Controls Group is offering customers a new helpful guide that features drum inspection guidelines for drum level instrumentation, per Section 1 of the ASME Code. The guide was recently updated to include the 2008 Code Addenda that will be effective January 1, 2009.

The guide provides an overview of requirements and safety reminders regarding water columns, water gage valves, gage glass, gage cocks, remote level indicators, magnetic water level gages, water column isolation shutoff valves and HRSG desuperheater drain pots. Common non-compliant drum level equipment arrangements are also covered. A list of recommendations, which are not required by the ASME Code but recommended by Clark-Reliance, is also included. For a free PDF version of this valuable guide, [CONTACT US](#)
