Clark-Reliance Goes 'Green' with New Product and Recycling Initiatives

Through product innovation and a unique grassroots company-wide recycling program, Clark-Reliance is reducing its environmental impact – and helping customers do the same.

New Switches without Mercury

Plants can now retrofit their Mercury-Based Level Switches with the unique, economical and environmentally-friendly Jerguson® Tri-Magnet Switch.

When spilled, mercury breaks up into tiny beads, which can lodge in cracks, sink traps and porous materials, and can mix with dust. Workers can be exposed to mercury by inhaling the vapor, by absorption through the skin, hair follicles and sweat glands. For those customers who do not want to risk spilling mercury, Clark-Reliance offers a retrofit kit that replaces the switch and mercury-filled chamber without removing the float housing.

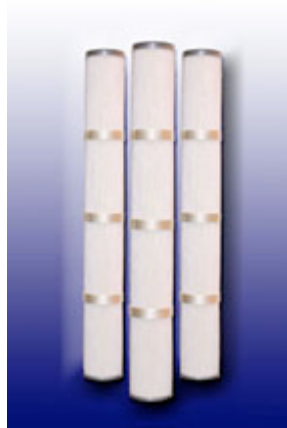

For more information about the Jerguson Tri-Magnet Switch, click [HERE](#)

Keeping Natural Gas Free of Contaminants

Clark-Reliance now offers the Niagara Coalescer and the Gas Sentinel filters, which are improvements over previous filter models.

The new filters use more multi-layer corrugated pleats that collect 4 to 9 times more contaminants than old style traditional filters. With a higher dirt-holding capacity, the number of change-outs is reduced, resulting in fewer filters sent to landfills.

Improving the Process for Alternative Fuels

Clark-Reliance representatives are available to advise producers on how to improve steam quality, reduce boiler vibrations and separate mineral deposits out of the production cycle. With our help, producers can change their process so their steam heats more quickly, doesn't scorch the product, eliminates vibration and uses less energy.

Our goal is to help these producers survive in a non-subsidized world where they can make a profit. This is important because, according to most experts, eventually government funding will go away.

Reducing Landfill Waste through Recycling

Clark-Reliance launched a company-wide recycling program to reduce solid waste going to local landfills and decrease costs associated with hauling away excess waste from our offices and manufacturing plants. Through education, investment in strategically-located recycling bins and employee incentives, we have recycled more than 300 tons of solid waste since the program's inception in August 2007.

Other efforts include reducing paper use by distributing Clark-Reliance product literature in CD format and Online through our Web site. To cut down on Styrofoam cups, we even purchased 200 reusable coffee mugs for employees and visitors.
